

# CSE 332 Winter 2026

## Lecture 14: Graphs

Nathan Brunelle

<http://www.cs.uw.edu/332>

# “Linear Time” Sorting Algorithms

- Useable when you are able to make additional assumptions about the contents of your list (beyond the ability to compare)
  - Examples:
    - The list contains only positive integers less than  $k$
    - The number of distinct values in the list is much smaller than the length of the list
- The running time expression will always have a term other than the list's length to account for this assumption
  - Examples:
    - Running time might be  $\Theta(k \cdot n)$  where  $k$  is the range/count of values

# BucketSort

- Assumes the array contains integers between 0 and  $k - 1$  (or some other small range)
- Idea:
  - Use each value as an index into an array of size  $k$
  - Add the item into the “bucket” at that index (e.g. linked list)
  - Get sorted array by “appending” all the buckets

# BucketSort Running Time

- Create array of  $k$  buckets
  - Either  $\Theta(k)$  or  $\Theta(1)$  depending on some things...
- Insert all  $n$  things into buckets
  - $\Theta(n)$
- Empty buckets into an array
  - $\Theta(n + k)$
- Overall:
  - $\Theta(n + k)$
- When is this better than mergesort?

# Properties of BucketSort

• In-Place?

• No

• Adaptive?

• No

• Stable?

• Yes!

# RadixSort

- Radix: The base of a number system
  - We'll use base 10, most implementations will use larger bases
- Idea:
  - BucketSort by each digit, one at a time, from least significant to most significant

|     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 103 | 801 | 401 | 323 | 255 | 823 | 999 | 101 | 113 | 901 | 555 | 512 | 245 | 800 | 018 | 121 |
| 0   | 1   | 2   | 3   | 4   | 5   | 6   | 7   | 8   | 9   | 10  | 11  | 12  | 13  | 14  | 15  |

Place each element into  
a "bucket" according to  
its 1's place

|     |                                 |     |                          |   |                   |   |   |     |     |
|-----|---------------------------------|-----|--------------------------|---|-------------------|---|---|-----|-----|
| 800 | 801<br>401<br>101<br>901<br>121 | 512 | 103<br>323<br>823<br>113 |   | 255<br>555<br>245 |   |   | 018 | 999 |
| 0   | 1                               | 2   | 3                        | 4 | 5                 | 6 | 7 | 8   | 9   |

# RadixSort

- Radix: The base of a number system
  - We'll use base 10, most implementations will use larger bases
- Idea:
  - BucketSort by each digit, one at a time, from least significant to most significant

|     |                                 |     |                          |   |                   |   |   |     |     |
|-----|---------------------------------|-----|--------------------------|---|-------------------|---|---|-----|-----|
| 800 | 801<br>401<br>101<br>901<br>121 | 512 | 103<br>323<br>823<br>113 |   | 255<br>555<br>245 |   |   | 018 | 999 |
| 0   | 1                               | 2   | 3                        | 4 | 5                 | 6 | 7 | 8   | 9   |

Place each element into  
a “bucket” according to  
its 10’s place

|     |     |     |   |     |     |   |   |   |     |
|-----|-----|-----|---|-----|-----|---|---|---|-----|
| 800 |     |     |   |     |     |   |   |   |     |
| 801 | 512 | 121 |   |     |     |   |   |   |     |
| 401 | 113 | 323 |   | 245 | 255 |   |   |   |     |
| 101 | 018 | 823 |   |     | 555 |   |   |   |     |
| 901 |     |     |   |     |     |   |   |   |     |
| 103 |     |     |   |     |     |   |   |   | 999 |
| 0   | 1   | 2   | 3 | 4   | 5   | 6 | 7 | 8 | 9   |

# RadixSort

- Radix: The base of a number system
  - We'll use base 10, most implementations will use larger bases
- Idea:
  - BucketSort by each digit, one at a time, from least significant to most significant

|     |     |     |   |     |     |   |   |   |     |
|-----|-----|-----|---|-----|-----|---|---|---|-----|
| 800 |     |     |   |     |     |   |   |   |     |
| 801 |     |     |   |     |     |   |   |   |     |
| 401 | 512 | 121 |   |     |     |   |   |   |     |
| 101 | 113 | 323 |   | 245 | 255 |   |   |   | 999 |
| 901 | 018 | 823 |   |     | 555 |   |   |   |     |
| 103 |     |     |   |     |     |   |   |   |     |
| 0   | 1   | 2   | 3 | 4   | 5   | 6 | 7 | 8 | 9   |

Place each element into  
a “bucket” according to  
its 100’s place

|     |     |     |     |     |     |   |   |     |     |
|-----|-----|-----|-----|-----|-----|---|---|-----|-----|
|     | 101 |     |     |     |     |   |   | 800 |     |
| 018 | 103 | 245 | 323 | 401 | 512 |   |   | 801 | 901 |
|     | 113 | 255 |     |     | 555 |   |   | 823 | 999 |
|     | 121 |     |     |     |     |   |   |     |     |
| 0   | 1   | 2   | 3   | 4   | 5   | 6 | 7 | 8   | 9   |

# RadixSort

$$n + k$$

- Radix: The base of a number system
  - We'll use base 10, most implementations will use larger bases
- Idea:
  - BucketSort by each digit, one at a time, from least significant to most significant

|     |                          |            |     |     |            |   |   |                   |            |
|-----|--------------------------|------------|-----|-----|------------|---|---|-------------------|------------|
| 018 | 101<br>103<br>113<br>121 | 245<br>255 | 323 | 401 | 512<br>555 |   |   | 800<br>801<br>823 | 901<br>999 |
| 0   | 1                        | 2          | 3   | 4   | 5          | 6 | 7 | 8                 | 9          |

Convert back into an array

|     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |     |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 018 | 101 | 103 | 113 | 121 | 245 | 255 | 323 | 401 | 512 | 555 | 800 | 801 | 823 | 901 | 999 |
| 0   | 1   | 2   | 3   | 4   | 5   | 6   | 7   | 8   | 9   | 10  | 11  | 12  | 13  | 14  | 15  |

# RadixSort Running Time

- Suppose largest value is  $m$
- Choose a radix (base of representation)  $b$
- BucketSort all  $n$  things using  $b$  buckets
  - $\Theta(n + k)$
- Repeat once per each digit
  - $\log_b m$  iterations
- Overall:
  - $\Theta(\underbrace{n \log_b m}_{\text{BucketSort}} + \underbrace{b \log_b m}_{\text{Repeat}})$
- In practice, you can select the value of  $b$  to optimize running time
- When is this better than mergesort?

# DARPANET

# Undirected Graphs

Definition:  $G = (V, E)$

Vertices/Nodes  
Edges

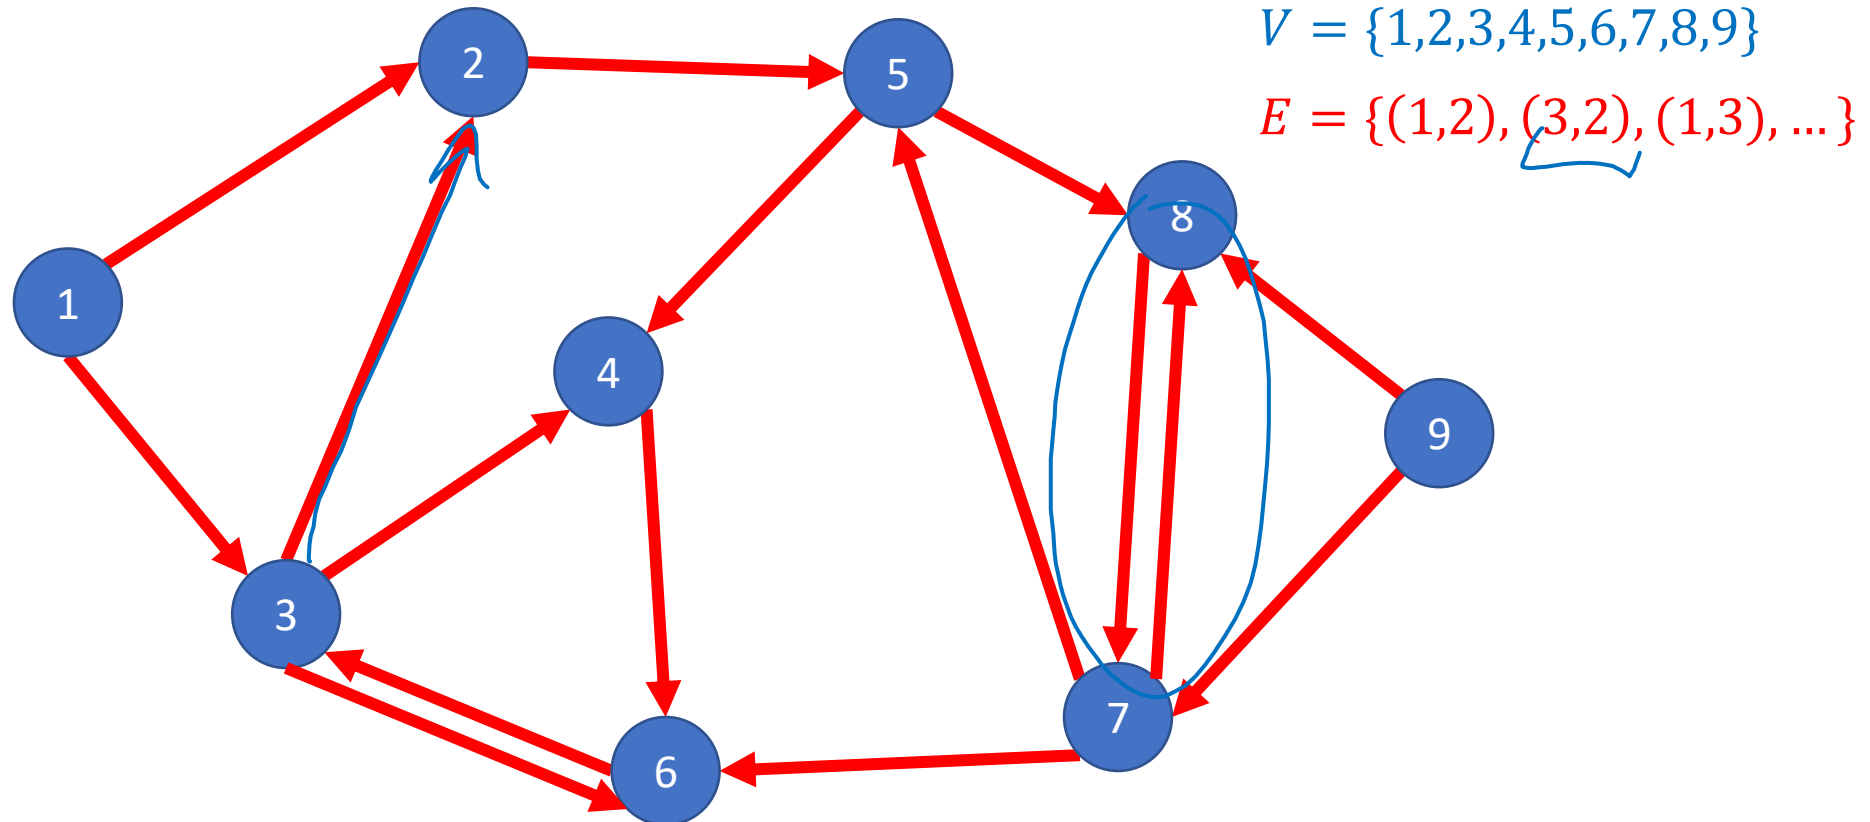

$V = \{1, 2, 3, 4, 5, 6, 7, 8, 9\}$

$E = \{(\underline{1}, 2), (2, 3), (1, 3), \dots\}$

# Directed Graphs

Definition:  $G = (\overset{\text{Vertices/Nodes}}{V}, \underset{\text{Edges}}{E})$

# Self-Edges and Duplicate Edges

Some graphs may have duplicate edges (e.g. here we have the edge (1,2) twice).  
Some may also have self-edges/loops (e.g. here there is an edge from 1 to 1).  
Graph with neither self-edges nor duplicate edges are called simple graphs

# Weighted Graphs

Definition:  $G = (V, E)$   
Vertices/Nodes  
Edges  
 $w(e) = \text{weight of edge } e$

# Graph Applications

- For each application below, consider:
  - What are the nodes, what are the edges?
  - Is the graph directed?
  - Is the graph simple?
  - Is the graph weighted?
- LinkedIn Connections
  - Nodes: person, Edges: “connection”, undirected, simple, unweighted
- Twitter/X Followers
  - Nodes: accounts, Edges: following, directed, simple, unweighted
- Java Inheritance
  - Nodes: classes, edges: implements/extends, directed, simple, unweighted
- Airline Routes
  - Nodes: airports, edges: flight, directed, not simple, weighted
- Course Prerequisites
  - Nodes: courses, edges: prereq, directed, simple, unweighted

# Some Graph Terms

- Adjacent/Neighbors
  - Nodes are adjacent/neighbors if they share an edge
- Degree
  - Number of edges “touching” a vertex
- Indegree
  - Number of incoming edges
- Outdegree
  - Number of outgoing edges

# Definition: Complete Graph

A Graph  $G = (V, E)$  s.t. for any pair of nodes  $v_1, v_2 \in V$  there is an edge from  $v_1$  to  $v_2$

Complete  
Undirected Graph

Complete  
Directed Graph

Complete Directed  
Non-simple Graph

# Definition: Path

A sequence of nodes  $(v_1, v_2, \dots, v_k)$   
s.t.  $\forall 1 \leq i \leq k - 1, (v_i, v_{i+1}) \in E$

## Simple Path:

A path in which each node appears at most once

## Cycle:

A path which starts and ends in the same place

# Definition: (Strongly) Connected Graph

A Graph  $G = (V, E)$  s.t. for any pair of nodes  $v_1, v_2 \in V$  there is a path from  $v_1$  to  $v_2$

# Definition: (Strongly) Connected Graph

A Graph  $G = (V, E)$  s.t. for any pair of nodes  $v_1, v_2 \in V$  there is a path from  $v_1$  to  $v_2$

Connected

Not (strongly) Connected

# Definition: Weakly Connected Graph

A Graph  $G = (V, E)$  s.t. for any pair of nodes  $v_1, v_2 \in V$  there is a path from  $v_1$  to  $v_2$  ignoring direction of edges

Weakly Connected

Not Weakly Connected

# Graph Density, Data Structures, Efficiency

- The maximum number of edges in a graph is  $\Theta(|V|^2)$ :
  - Undirected and simple:  $\frac{|V|(|V|-1)}{2}$
  - Directed and simple:  $|V|(|V| - 1)$
  - Direct and non-simple (but no duplicates):  $|V|^2$
- If the graph is connected, the minimum number of edges is  $|V| - 1$
- If  $|E| \in \Theta(|V|^2)$  we say the graph is **dense**
- If  $|E| \in \Theta(|V|)$  we say the graph is **sparse**
- Because  $|E|$  is not always near to  $|V|^2$  we do not typically substitute  $|V|^2$  for  $|E|$  in running times, but leave it as a separate variable
  - However,  $\log(|E|) \in \Theta(\log(|V|))$

# Definition: Tree

A Graph  $G = (V, E)$  is a tree if it is undirect, connected, and has no cycles (i.e. is acyclic). Often one node is identified as the “root”

A Tree

A Rooted Tree
